19	Often interrupts or intrudes on others (e.g., butts into conversations/games)	Very Much
20	Often has difficulty sitting still, being quiet, or inhibiting impulses in the classroom or at home	Very Much

This rating scale indicates the possibility of ADHD. Details are given below.

	Totals	Average	5% Cutoff	Indication
Average of scores for ADHD - Inattention	28	2.80	1.78	Inattention: #TRUE#
Average of scores for Hyperactivity/Impulsivity	27	2.70	1.44	Hyperactivity / Impulsivity: #TRUE#
Average of scores for ADHD - Combined Type	55	2.75	1.67	Combined-Type: #TRUE#

The 4-point response is scored 0- 3 (Not at All = 0, Just A Little = 1, Quite A Bit = 2, and Very Much = 3). Subscale scores on the SNAP-IV are calculated by summing the scores on the items in the specific subset (eg., Inattention) and dividing by the number of items in the subset (eg.,10). The score for any subset is expressed as the Average Rating-Per-Item. Comparing this average to the respective 5% Cutoff for parent ratings allows us to identify the top 5% of ADHD.
